

CONCEPT AND MVP DESIGN

CONVVA African SME Commerce Platform

One commerce record coordinating products, stock, orders, payment and delivery across channels

Status: Concept / MVP design

Domain: SME commerce and retail technology

Role: Founder and Product Business Analyst

The problem and what discovery found

Business problem

Small merchants manage products, stock and orders across social media, messaging and separate tools, creating duplication, overselling and weak fulfilment visibility.

What the analysis found

1

Merchants repeat product updates across social and messaging channels

2

Stock is checked after customers order

3

Payment and delivery status sit apart from the order

As-Is process

Full-resolution SVG is in the Diagrams folder

CONVVA: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

CONVVA: To-Be process

Designed future state, with every decision outcome labelled.

Proposed operating-model change

Area	Before	After
Catalogue	Products recreated per channel	One record publishes to selected channels
Inventory	Checked manually after ordering	Reserved at order, released if unpaid
Order control	Status spread across messages	One timeline for payment, fulfilment and delivery
Setup	Many tools configured separately	Guided wizard with test transaction

How success will be measured

No live outcomes are claimed for this case

Measure	Current evidence status	How it will be used
Stock-mismatch cancellations	Defined for MVP	Target near zero
Setup completion	Defined for MVP	Without support contact
Order age by stage	Defined for MVP	Spot fulfilment bottlenecks

Recommendations and key risks

Recommended next actions

- Interview ten merchants across two cities
- Prototype the setup wizard and test with five merchants
- Confirm provider APIs per launch country
- Start with one social channel plus storefront

Risks with a named owner

R-01

Channel stock becomes inconsistent

Single inventory source and sync alerts

R-02

Failed payment appears complete

Confirmed payment states only

R-03

Setup is too complex for merchants

Guided wizard and usability tests

R-04

Provider outage blocks fulfilment

Exception queue and fallback provider
