

PRODUCT IN DEVELOPMENT

IndulgeTix Event Ticketing Platform

One product model connecting event setup, ticket ownership, venue access and settlement

Status: Product development

Domain: Event technology and payments

Role: Founder and Product Business Analyst

The problem and what discovery found

Business problem

Organisers need connected event setup, ticket ownership, scanning and settlement, while attendees need reliable purchase, transfer and refund journeys.

What the analysis found

1

Promotion, orders, guest lists and entry control often sit in separate tools

2

Transfers and refunds can break ownership traceability

3

Settlement needs reconciliation of tickets, fees, refunds and payouts

As-Is process

Full-resolution SVG is in the Diagrams folder

IndulgeTix: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

To-Be process

Full-resolution SVG is in the Diagrams folder

IndulgeTix: To-Be process

Designed future state, with every decision outcome labelled.

Ticket state model

Full-resolution SVG is in the Diagrams folder

IndulgeTix: Ticket state model

Every ticket is in exactly one state. Transitions not shown are rejected by the platform.

Start event Activity Decision End event

Proposed operating-model change

Area	Before	After
Ticket control	Orders and guest lists held separately	One ticket record with owner and state
Transfers and refunds	Handled by message	Eligibility rules and audit history
Entry	Name checks at the door	Real-time scan validation
Settlement	Assembled after the event	Reconciled before payout

How success will be measured

No live outcomes are claimed for this case

Measure	Current evidence status	How it will be used
Duplicate-scan attempts	Defined, pilot not yet run	Target zero admitted duplicates
Settlement variance	Defined, pilot not yet run	Payout only at zero or explained variance
Transfer completion	Defined	Monitor abandoned transfers

Recommendations and key risks

Recommended next actions

- Pilot with one organiser and one venue before wider launch
- Test scanner offline mode at a real door
- Agree refund policy templates with organisers
- Review settlement variance after every pilot event

Risks with a named owner

R-01

Duplicate ticket ownership

State model and audit log

R-02

Duplicate entry

Real-time scan validation

R-03

Settlement variance

Pre-payout reconciliation

R-04

Refund or transfer abuse

Eligibility and permission rules
