

CONCEPT AND MVP DESIGN

Verdaso ESG Evidence Infrastructure

Source-proof evidence capture with human validation and versioned framework mapping

Status: Concept / MVP design

Domain: ESG, compliance and sustainability technology

Role: Founder and Product Business Analyst

The problem and what discovery found

Business problem

SMEs hold ESG evidence in photos, PDFs and spreadsheets without source context, so reports are slow to assemble and hard for auditors to trust.

What the analysis found

1

Evidence files are separated from their source context

2

AI extraction errors can become accepted facts

3

Framework changes break comparability between periods

As-Is process

Full-resolution SVG is in the Diagrams folder

Verdaso: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

To-Be process

Full-resolution SVG is in the Diagrams folder

Verdaso: To-Be process

Designed future state, with every decision outcome labelled.

Proposed operating-model change

Area	Before	After
Capture	Files saved anywhere	Source, time and location recorded on capture
Validation	Values copied by hand	AI draft plus human approval
Corrections	Overwritten	Appended with reason and approver
Reporting	Framework version unclear	Versioned mappings printed on output

How success will be measured

No live outcomes are claimed for this case

Measure	Current evidence status	How it will be used
Source-link completeness	Defined for MVP	Target 100% for approved records
Extraction correction rate	Defined for MVP	Monitor model quality
Auditor query time	Defined for MVP	Compare with manual baseline

Recommendations and key risks

Recommended next actions

- Interview two auditors on acceptable digital evidence
- Run a data protection impact assessment before any GPS capture
- Start with one framework and one sector
- Measure correction rates before automating further

Risks with a named owner

R-01

AI misclassifies evidence

Mandatory human validation

R-02

Location data creates privacy risk

Purpose limitation and precision control

R-03

Immutable record blocks lawful correction

Append-only correction model

R-04

Framework requirements change

Effective-dated mappings
