

Functional Requirements Document

Status: Delivered | Domain: Retail and e-commerce | Role: IT Project Manager, E-commerce and Digital Systems

Purpose

Describes how the solution must behave so each business requirement can be designed, built and tested. Each functional requirement traces to a parent business requirement.

Functional requirements

ID	Parent	System behaviour	Business rule or validation
FR-01	BR-01	Delivery board holds one item per workstream task with owner, status, due date and dependency fields	Status values: Not started, In progress, Blocked, Done
FR-02	BR-01	Weekly status summary is generated automatically for leadership	Summary lists blocked and overdue items first
FR-03	BR-02	Microsoft 365 groups control access to shared libraries by role	New users are added to a role group, never to individual files
FR-04	BR-03	Chatbot returns approved answers for common product, delivery and returns questions	Unmatched or sales-intent queries route to customer service
FR-05	BR-04	Custom-order form captures metal, size, stones, engraving, budget and reference images	Order cannot move to production until customer confirmation is recorded
FR-06	BR-05	Test scenarios are linked to requirement IDs with pass or fail and defect reference	A release needs all Must scenarios passed

User stories

ID	Parent	Story	Acceptance (Given / When / Then)
US-01	BR-04	As a customer ordering a custom piece, I want to confirm my specification before it is made, so that what I receive matches what I asked for.	Given I have submitted a custom request When I review the summary and confirm it Then the order moves to production with my confirmed brief attached
US-02	BR-03	As a customer with a routine question, I want an instant, accurate answer, so that I do not wait in a manual queue.	Given my question matches an approved topic When I ask it on the website or WhatsApp Then the approved answer is returned, or I am passed to a person
US-03	BR-01	As a business owner, I want one view of every workstream, so that I can see blockers without chasing people.	Given items are on the delivery board When I open the weekly summary Then blocked and overdue items appear first with their owners

Non-functional requirements

Area	Requirement
Security	Access follows role groups and least privilege
Usability	Custom-order form completes on mobile in under five minutes
Availability	Chatbot escalates to a person when it cannot answer
Auditability	Order confirmations and status changes are time-stamped

Key data

Field	Type	Allowed values
work_item_id	Text	WI-0001 format
owner	Text	Named role
status	Category	Not started, In progress, Blocked, Done

Field	Type	Allowed values
request_type	Category	Routine question, Sales lead, Custom order, Complaint
custom_specification	Text	Structured form fields
confirmed_at	Datetime	ISO 8601
