

DELIVERED WORK

The Ecommerce Boss Event Operations Automation

Automation replaced repeated copying while keeping manual control for exceptions

Status: Delivered across client engagements

Domain: E-commerce, events and digital services

Role: Founder and Lead Business Analyst

The problem and what discovery found

Business problem

Disconnected forms, spreadsheets and email exchanges caused duplicate entry, unclear ownership, inconsistent hand-offs and limited status visibility for client events.

What the analysis found

1

Forms, spreadsheets and email created duplicate entry

2

Ownership changed informally through chat

3

Failed messages or integrations were hard to see

As-Is process

Full-resolution SVG is in the Diagrams folder

The Ecommerce Boss: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

To-Be process

Full-resolution SVG is in the Diagrams folder

The Ecommerce Boss: To-Be process

Redesigned future state, with every decision outcome labelled.

What changed

Area	Before	After
Data capture	Information copied between tools	One validated record created from each submission
Ownership	Work assigned through messages	Owner and next action recorded against status
Communication	Updates written repeatedly	Approved messages triggered by decisions
Exceptions	Failures could stay hidden	Failed steps enter a manual recovery queue

Evidence and measures

What is evidenced today and what to track next

Measure	Current evidence status	How it will be used
Duplicate entry	Removed for automated routes	Sample-check monthly
Unowned records	Visible in a dedicated view	Target zero at weekly review
Exception age	Highlighted after 48 hours	Track closure time per event

Recommendations and key risks

Recommended next actions

- Sample-check records for duplicates each month
- Keep templates under client approval
- Review the exception queue at every status meeting
- Revisit the options matrix when volumes grow

Risks with a named owner

R-01

Duplicate records

Unique IDs and duplicate flags

R-02

Automation sends the wrong message

Trigger tests and approved templates

R-03

Client cannot maintain the solution

Options assessment and handover guide

R-04

Failures go unnoticed

Exception queue and ageing highlight
