

DELIVERED WORK

BOZ

BOZ Jewelry Retail and E-commerce Transformation

Retail service redesign connecting customer enquiries, custom orders and internal delivery visibility

Status: Delivered

Domain: Retail and e-commerce

Role: IT Project Manager, E-commerce and Digital Systems

The problem and what discovery found

Business problem

Fragmented delivery updates, repetitive customer enquiries and inconsistent custom-order requirement capture reduced visibility and created friction in the customer journey.

What the analysis found

1

Repeated WhatsApp questions consumed customer-service capacity

2

Custom-order details were captured inconsistently, causing disputes and rework

3

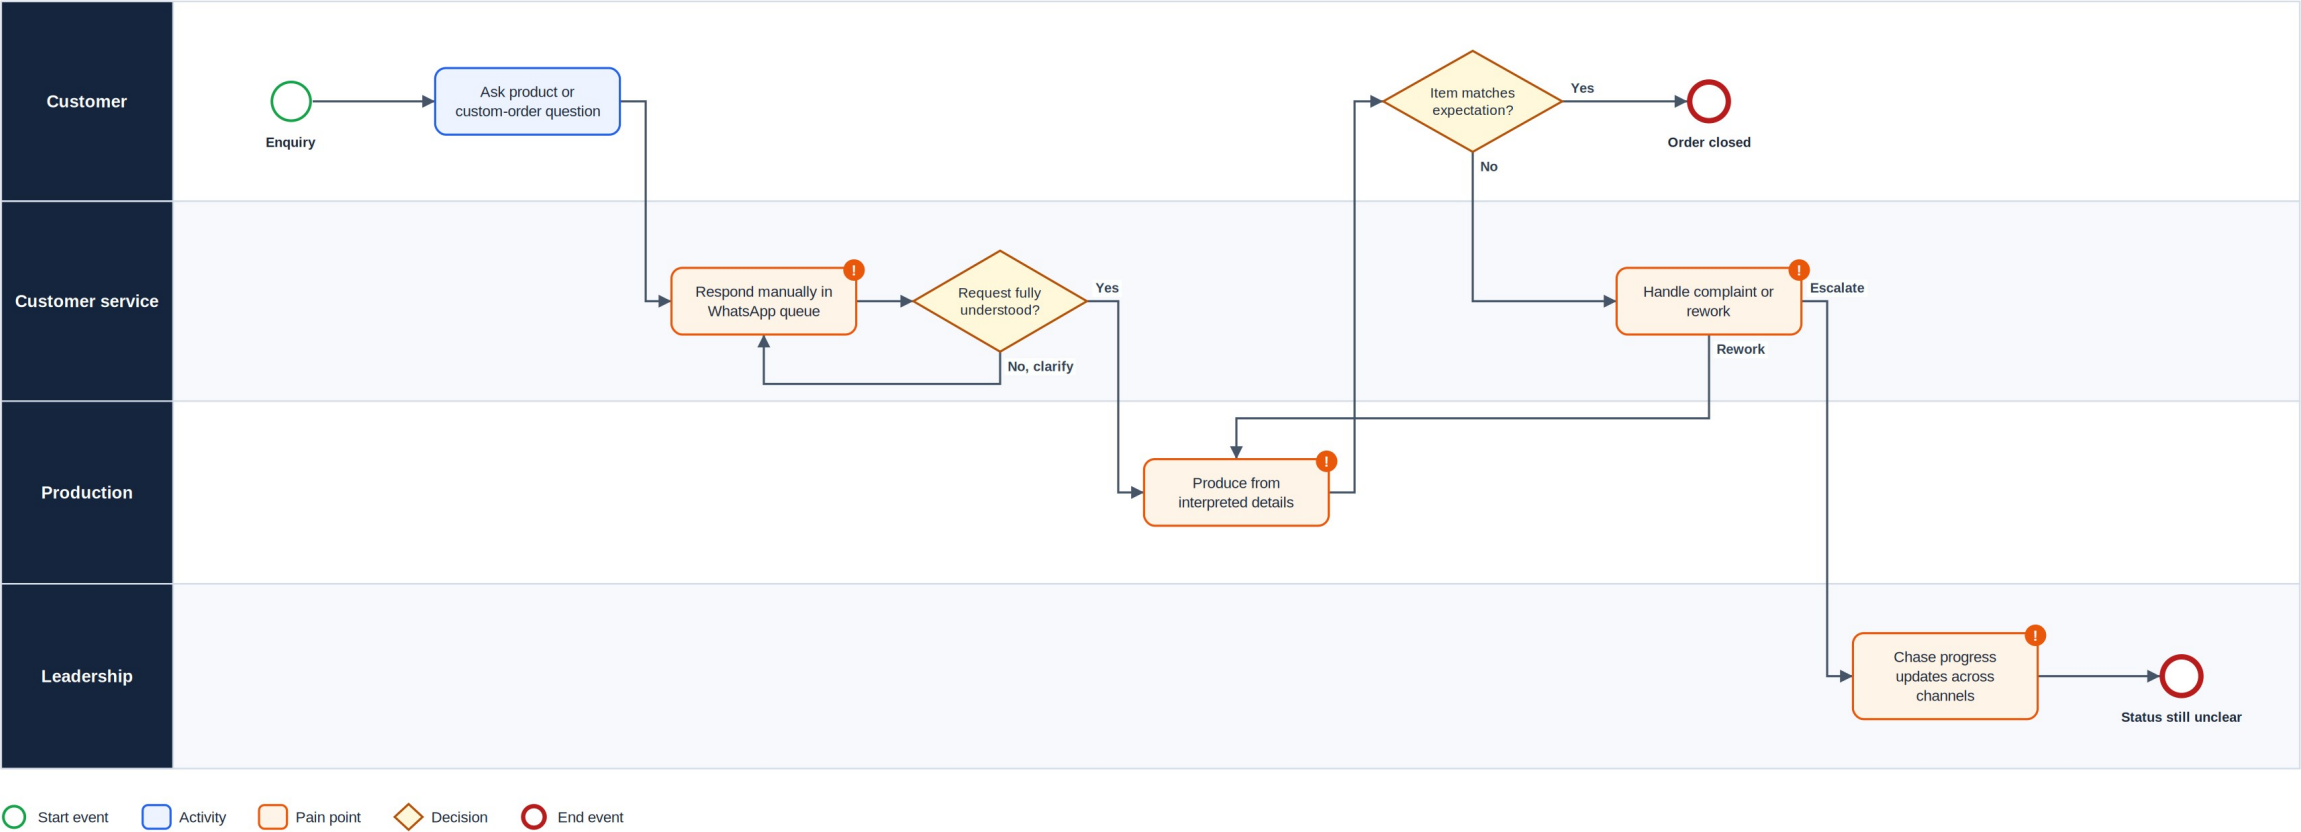

Project updates sat across separate channels and documents

As-Is process

Full-resolution SVG is in the Diagrams folder

BOZ Jewelry: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

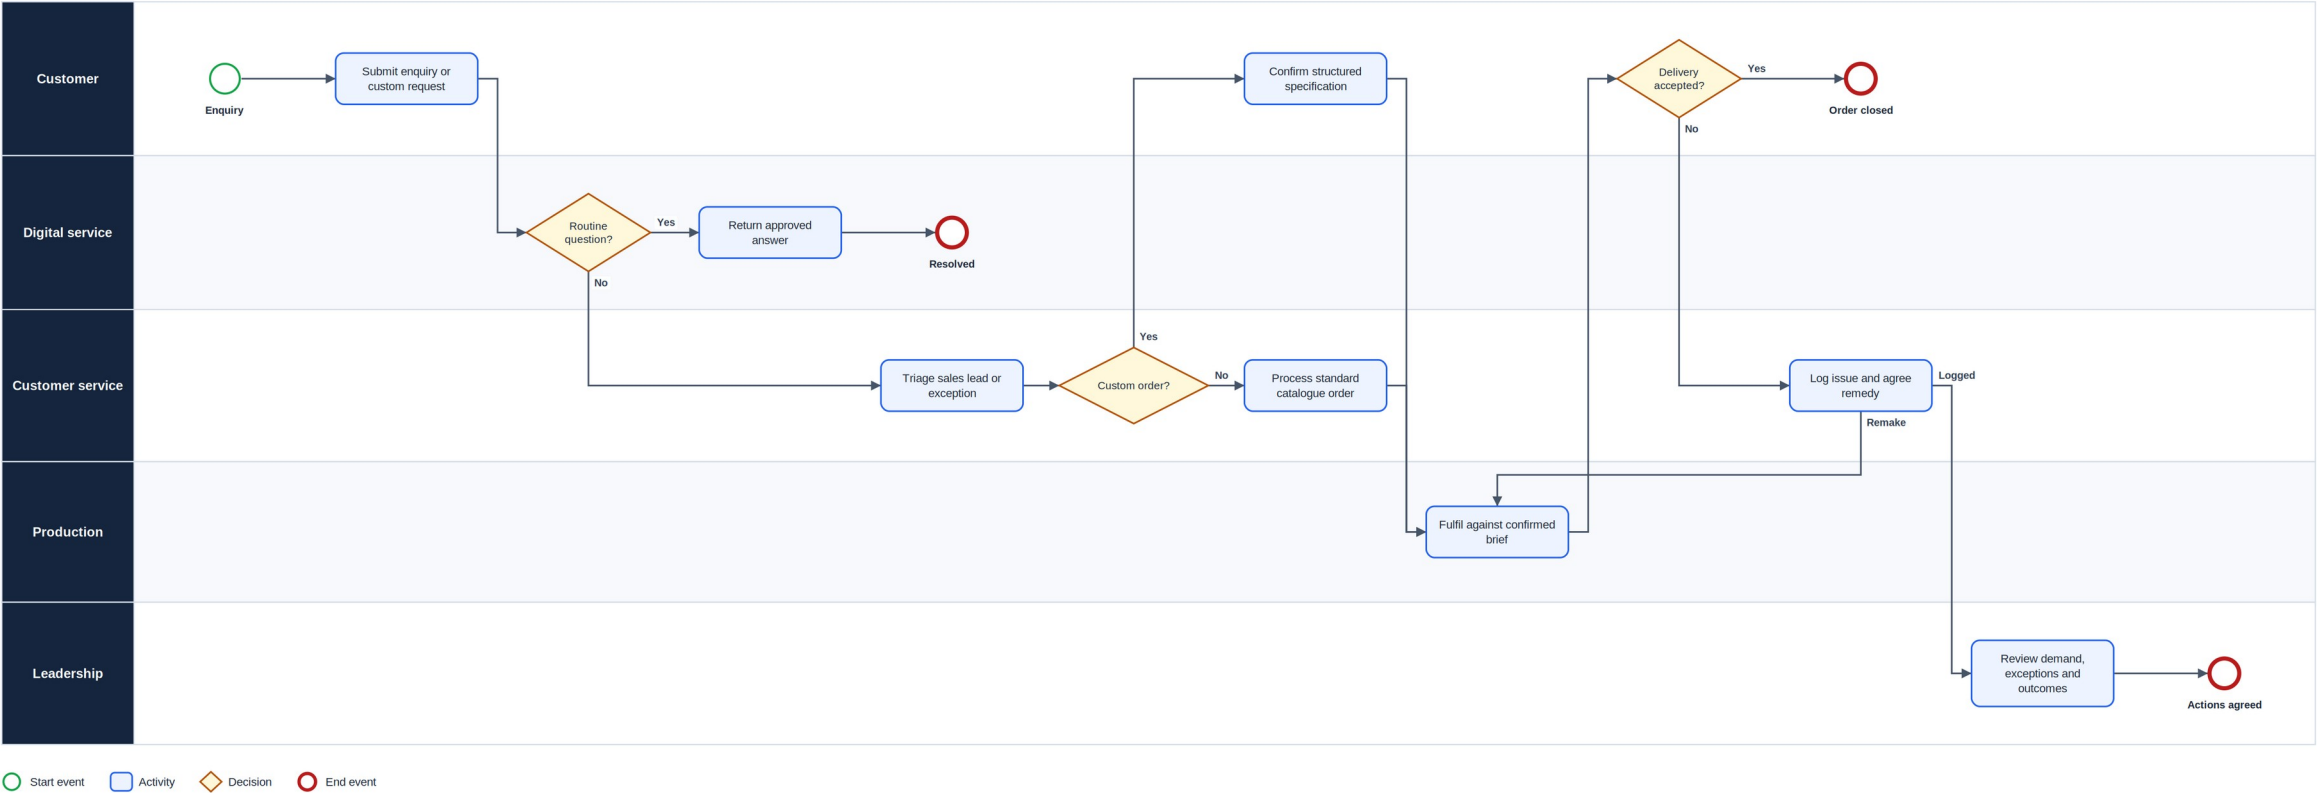

To-Be process

Full-resolution SVG is in the Diagrams folder

BOZ Jewelry: To-Be process

Redesigned future state, with every decision outcome labelled.

What changed

Area	Before	After
Customer support	Every enquiry entered the same manual queue	Routine questions answered consistently; sales and exceptions go to people
Custom orders	Requirements interpreted differently	Confirmed specification is the reference before fulfilment
Delivery governance	Updates were fragmented	Owners, dependencies, risks and decisions visible on one board
Collaboration	Files and communication dispersed	Microsoft 365 gave controlled shared access by role

Reported outcomes

Figures reported by the organisation after the changes; underlying commercial data is not published

60%

increase in engagement (reported)

25%

uplift in digital performance (reported)

Recommendations and key risks

Recommended next actions

- Track enquiry containment and reasons for human escalation
- Measure custom-order remakes against confirmed specifications
- Review access groups whenever roles change
- Feed customer feedback into catalogue and content decisions

Risks with a named owner

R-01

Users revert to fragmented communication

Demonstrations and one agreed channel per purpose

R-02

Custom requirements are misunderstood

Structured capture and customer confirmation

R-03

Automated answers become inaccurate

Approved content and escalation route

R-04

Permissions expose information incorrectly

Role-group access and access tests
