

Business Requirements Document

Status: Live | Domain: Event technology and payments | Role: Founder, Product Owner and Business Analyst

Business problem

Organisers selling to Nigerian and diaspora audiences needed to take payment in more than one currency, get paid reliably and control who enters. Early builds were split across separate codebases, payment callbacks were unreliable and revenue was reported in blended currencies.

Objectives

ID	Objective
OBJ-01	Take payment reliably and deliver tickets immediately
OBJ-02	Report revenue, balances and payouts accurately in each currency
OBJ-03	Control event access through ticket ownership, team roles and scanning
OBJ-04	Protect buyers, organisers and the platform through refunds, dispute evidence and security
OBJ-05	Measure marketing performance only with visitor consent

Scope

In scope	Out of scope
Event creation, ticket types and checkout Stripe and Flutterwave payments, refunds and webhooks Multi-currency wallet, withdrawals and admin approval Ticket transfer, swaps and team access roles Scanning, attendee records and exports Admin panel, dispute evidence and security hardening Consent-gated GA4, Meta and TikTok tracking	Native mobile apps Seat maps and reserved seating Resale marketplace pricing Accounting-system integration

Business requirements

ID	Requirement	Priority	Objective	Acceptance criterion
BR-01	Confirmed payments issue tickets in the same checkout session	Must	OBJ-01	Tickets are emailed once the return page verifies payment; pending orders are reconciled automatically
BR-02	Revenue, wallet balances and payouts are held and shown per currency	Must	OBJ-02	No figure sums two currencies; each event reports in its own currency
BR-03	Gateway refunds cancel the ticket and notify the buyer	Must	OBJ-04	Webhook signature is verified, the full ticket price is refunded and the ticket shows Cancelled
BR-04	Organisers grant event access by role	Must	OBJ-03	Door staff, viewer and manager roles exist; scanners can scan only events they own or are invited to
BR-05	Tickets can be sent, transferred and swapped without distorting revenue	Should	OBJ-03	A swapped ticket moves its revenue and is not counted as a new sale
BR-06	Chargeback evidence is compiled from checkout records	Should	OBJ-04	Terms consent is logged at checkout and an evidence PDF can be exported per dispute
BR-07	Tracking pixels load only after consent	Must	OBJ-05	GA4, Meta and TikTok stay blocked until accepted; purchase events carry an event_id for deduplication
BR-08	Accounts, content and secrets are protected	Must	OBJ-04	Auth endpoints are rate limited, rich text is sanitised and no secret is exposed in code or endpoints

Assumptions and constraints

Assumptions	Constraints
Organisers price each event in one currency Gateways remain the system of record for payment status Door staff have a smartphone at entry	Small budget and contract development capacity Two gateways with different webhook and refund behaviour Serverless hosting with time limits on each request

Key risks

ID	Risk	Severity	Response	Owner
R-01	Payment callbacks arrive late or not at all	High	Verify on return page and reconcile pending orders	Product owner
R-02	Currency errors misstate organiser earnings	High	Per-currency ledger and display rules	Product owner
R-03	Security gaps left by rapid early builds	High	Audit: remove debug endpoints, move secrets, rate limit auth	Product owner
R-04	Chargebacks lost without evidence	Medium	Log terms consent and export evidence per dispute	Admin and finance
R-05	Dependence on individual contract developers	Medium	Single codebase, written requirements and owner-led fixes	Product owner

Delivery timeline

Period	What was delivered
Nov 2024 to Apr 2025	First build with contract developers: Flask API, React dashboard, Paystack then Stripe, referrals and affiliates
Mar 2025	Next.js front end trialled to replace the React dashboard
Aug to Sep 2025	Rebuilt as one Next.js and Prisma platform: Flutterwave and Stripe webhooks, scanning, manual sales, currencies and African time zones
Dec 2025 to Jun 2026	Complimentary tickets, reCAPTCHA, search filters, admin panel and checkout coupons
Jul to Sep 2026	Owner-led hardening: multi-currency wallets, refunds, duplicate-charge root cause, reconciliation, team roles, dispute evidence, security audit and consented tracking
