

UAT and Validation Plan

Status: Live | Domain: Event technology and payments | Role: Founder, Product Owner and Business Analyst

Approach

Scenarios come from the acceptance criteria. Each defect was logged, fixed and retested before release, and every scenario below maps to a change that is now live.

Test scenarios

Test	Req.	Given	When	Then	Status
UAT-01	BR-01	a buyer whose payment succeeded but whose webhook is delayed	they land on the return page	the order is verified and tickets are emailed	Released
UAT-02	BR-01	an order left pending for a future event	reconciliation runs	a paid order completes and an unpaid one stays pending	Released
UAT-03	BR-02	an event with naira and pound sales	the organiser opens the wallet	each currency shows its own balance	Released
UAT-04	BR-03	a refund issued in Stripe	the webhook arrives	the ticket is cancelled and the buyer is emailed	Released
UAT-05	BR-04	door staff invited to event A	they scan a ticket for event B	the scan is refused	Released
UAT-06	BR-05	an organiser swaps a sold ticket	revenue is recalculated	the total is unchanged and no new sale appears	Released
UAT-07	BR-06	a chargeback on a completed order	admin exports evidence	the PDF shows consent time, reason code and prior orders	Released
UAT-08	BR-07	a first-time visitor	they have not accepted cookies	no GA4, Meta or TikTok request is sent	Released

Exit criteria

- All Must scenarios pass
- No open high-severity defect on payment, access or privacy
- Business owner confirms the outcome
- Known limitations and follow-up actions recorded
