

DELIVERED WORK

The Ecommerce Boss SME Consulting

Business analysis for small businesses and SMEs: turning “we need a website” into agreed goals, prioritised scope and measurable results

Status: Ongoing (2024 to present)

Domain: SME digital services: marketing operations and web development

Role: Business Analyst

The problem and what discovery found

Business problem

Small-business owners arrive with a solution already in mind, such as a new website or more sales from social media. Underneath there is usually no agreed goal, enquiries scattered across direct messages, forms and spreadsheets, and no way to see what marketing or the website actually returns, all on a tight budget.

What the analysis found

1

Requests arrive as solutions (“build me a website”) before anyone has agreed the goal

2

Leads and customers live across DMs, forms and spreadsheets, so follow-ups are missed

3

Owners cannot see what their marketing or website returns, so budget decisions are guesswork

As-Is process

Full-resolution SVG is in the Diagrams folder

The Ecommerce Boss: As-Is process

Typical small business before the engagement: pain points marked.

To-Be process

Full-resolution SVG is in the Diagrams folder

The Ecommerce Boss: To-Be process

After the engagement, with every decision outcome labelled.

What changed

Area	Before	After
Starting point	A request for a website or more sales	An agreed goal, success measure and prioritised scope
Enquiries	Scattered across DMs, forms and spreadsheets	One record per enquiry with source, status and owner
Follow-up	Manual, and often missed	Automated confirmations and reminders
Decisions	Budget spent on guesswork	Performance by channel, tracked with consent

Delivered outcomes

Client results belong to each business and are not published

5 steps

repeatable engagement model: discover, define, build, test, hand over

1 record

per client for every enquiry, replacing DMs and spreadsheets

Recommendations and key risks

Recommended next actions

- Agree one success measure with every owner at the start
- Keep a shared change log so scope stays inside budget
- Review performance by channel with each client monthly
- Turn repeated fixes into reusable templates across clients

Risks with a named owner

R-01

Scope grows beyond a fixed small-business budget

MoSCoW prioritisation and a change log agreed with the owner

R-02

Owner has little time for discovery and testing

Short, structured sessions and clear decision points

R-03

Tools are abandoned after handover

Simple tools, training and a written guide

R-04

Poor data quality in legacy spreadsheets

Validation at intake and a one-off clean-up
