

DELIVERED WORK

NaijaFoodFestival Multi-user Registration Service

Three distinct journeys replaced a single registration concept

Status: Delivered

Domain: Events and hospitality

Role: Product Owner and Business Analyst, HunterTV Africa

The problem and what discovery found

Business problem

A single registration concept did not reflect the different information, approval and communication needs of attendees, vendors and volunteers.

What the analysis found

1

Attendees, vendors and volunteers had different data and decision needs

2

A generic route risked irrelevant fields and missing approvals

3

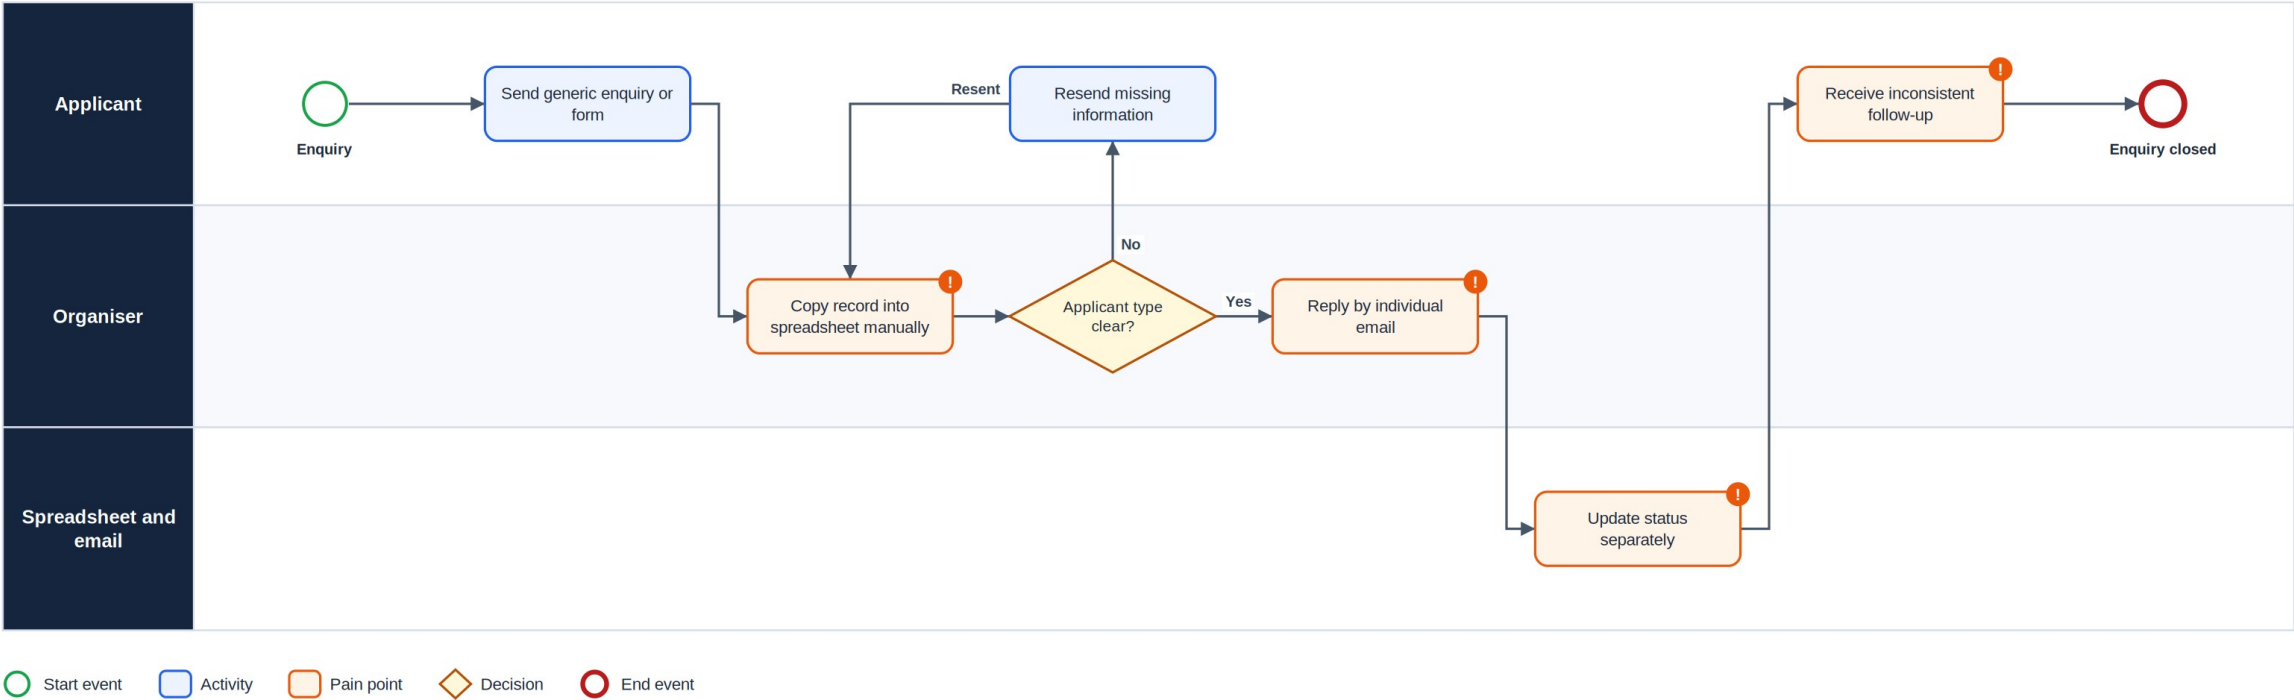

Organisers needed one view of status and exceptions

As-Is process

Full-resolution SVG is in the Diagrams folder

NaijaFoodFestival: As-Is process

Current state before the redesign. Orange activities are the pain points found in discovery.

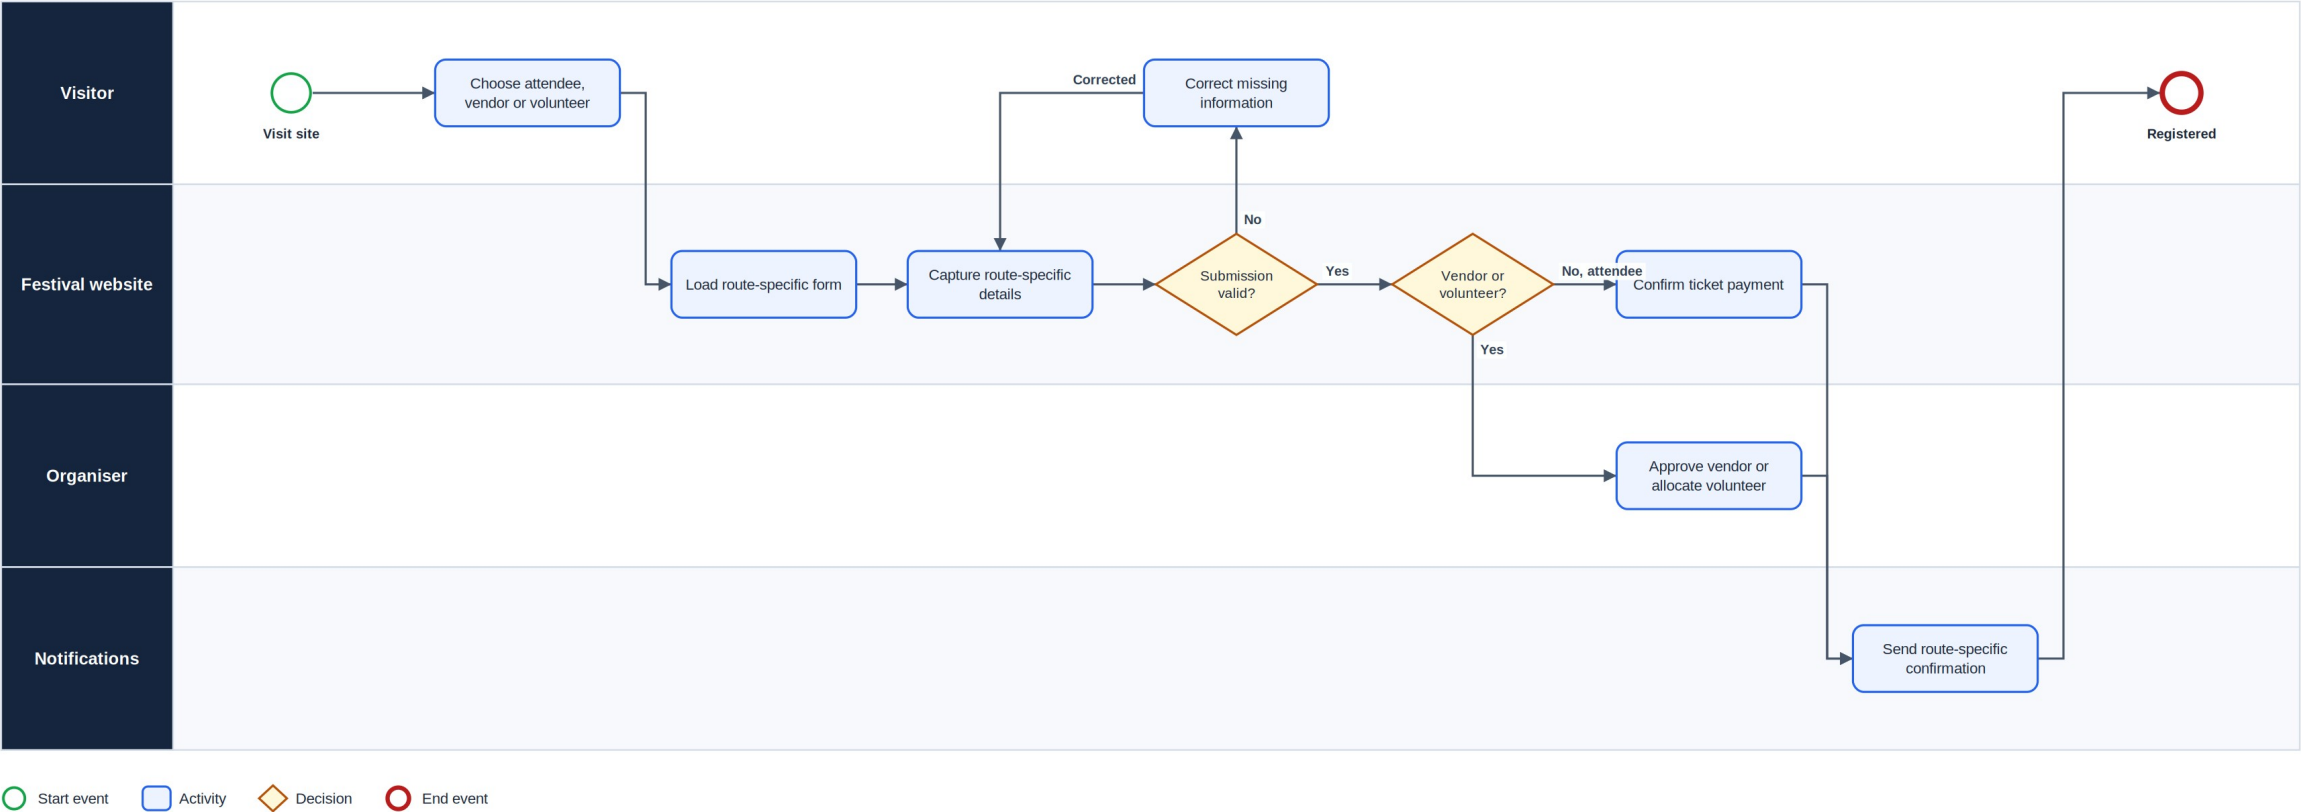

To-Be process

Full-resolution SVG is in the Diagrams folder

NaijaFoodFestival: To-Be process

Redesigned future state, with every decision outcome labelled.

What changed

Area	Before	After
Attendees	Generic registration	Purchase journey with confirmation and event updates
Vendors	No clear decision path	Evidence review, decision status and decision email
Volunteers	Availability managed informally	Availability capture, allocation and briefing
Organisers	Manual reconciliation	Central route, status, owner and next action

Evidence and measures

What is evidenced today and what to track next

Measure	Current evidence status	How it will be used
User journeys	Three distinct routes delivered	Report completion by route
Pre-launch validation	End-to-end test cycle completed	Repeat before each season
Exception age	To be tracked from Season 2	Target same-week resolution

Recommendations and key risks

Recommended next actions

- Report completion and drop-off by route each season
- Keep message templates under change control
- Review vendor rules with organisers before applications open
- Retain the pre-launch test pack as a regression suite

Risks with a named owner

R-01

One form collects irrelevant information

Separate routes by purpose

R-02

Email and record status diverge

Send only after status update; trigger tests

R-03

Vendor approval rules are incomplete

Decision checkpoint with organisers

R-04

Ticketing or email service is unavailable

Fallback communication and manual list
