

UAT and Validation Plan

Status: Product development | Domain: Event technology and payments | Role: Product Business Analyst

Approach

Scenarios come from the acceptance criteria. Defects are logged with reproduction steps, fixed and retested before closure. Scenarios are defined for the pilot and will be run before release.

Test scenarios

Test	Req.	Given	When	Then	Status
UAT-01	BR-01	an organiser creates a recurring event	no end date or count is given	publish is blocked with a message	Planned
UAT-02	BR-02	a ticket is transferred twice	history is opened	three owners appear in order with timestamps	Planned
UAT-03	BR-03	a Scanned ticket	the owner requests a transfer	the request is rejected with a reason	Planned
UAT-04	BR-04	a ticket already scanned	it is scanned again	Rejected shows with the first-scan time	Planned
UAT-05	BR-05	an event with one unmatched refund	the organiser opens settlement	variance shows and payout is blocked	Planned

Exit criteria

- All Must scenarios pass
- High-severity defects fixed or formally accepted
- Business owner confirms the outcome
- Known limitations and follow-up actions recorded
