

Functional Requirements Document

Status: Concept / MVP design | Domain: ESG, compliance and sustainability technology | Role: Product Business Analyst

Purpose

Describes how the solution must behave so each business requirement can be designed, built and tested. Each functional requirement traces to a parent business requirement.

Functional requirements

ID	Parent	System behaviour	Business rule or validation
FR-01	BR-01	Capture stores file hash, timestamp and permitted location	Location precision follows the organisation setting
FR-02	BR-02	Extracted fields default to Draft until a reviewer approves	Draft values cannot appear in reports
FR-03	BR-03	Corrections append a new version with reason	Original values are never overwritten
FR-04	BR-04	Role-based views for SME, auditor and investor	Investor view shows approved summary only
FR-05	BR-05	Framework mapping tables are effective-dated	Reports print framework and mapping version

User stories

ID	Parent	Story	Acceptance (Given / When / Then)
US-01	BR-02	As a reviewer, I want to approve extracted values before they count, so that AI mistakes never reach a report.	Given a document has been extracted When I approve the values Then they become part of the versioned record
US-02	BR-01	As an auditor, I want to trace any figure back to its source, so that I can test the evidence.	Given a report figure When I click it Then the original file, capture time and approver are shown

Non-functional requirements

Area	Requirement
Integrity	Evidence files hashed on capture
Privacy	Location precision configurable per organisation
Auditability	Append-only change history

Key data

Field	Type	Allowed values
evidence_id	Text	EVD-0001 format
source_type	Category	Photo, PDF, CSV
capture_timestamp	Datetime	ISO 8601
location_metadata	Geospatial	Precision per organisation setting
validation_status	Category	Draft, Approved, Rejected, Superseded
framework_version	Text	Framework and version code
