

Business Requirements Document

Status: Delivered evaluation work | Domain: Artificial intelligence services | Role: AI Evaluation Contractor

Business problem

Evaluating AI outputs at scale needs consistent interpretation of criteria, clear separation of evidence from assumption, and safe adaptation when guidance changes.

Objectives

ID	Objective
OBJ-01	Apply the current criteria consistently
OBJ-02	Separate evidence from assumption
OBJ-03	Record clear, checkable rationale
OBJ-04	Adapt safely when guidance changes

Scope

In scope	Out of scope
Criterion-level assessment Evidence-based rationale Escalation of ambiguous cases Calibration feedback	Model training decisions Client product roadmaps

Business requirements

ID	Requirement	Priority	Objective	Acceptance criterion
BR-01	The active criteria version is visible on every task	Must	OBJ-01	Each decision links to a guidance version
BR-02	Each criterion has a recorded assessment	Must	OBJ-02	Required criterion fields cannot be skipped
BR-03	Rationale cites observed evidence	Must	OBJ-03	Explanation quotes or points to the specific issue
BR-04	Ambiguous cases can be escalated	Should	OBJ-04	Escalation route and status are visible

Assumptions and constraints

Assumptions	Constraints
Guidance owners publish versioned criteria Quality reviewers sample decisions	Asynchronous work across time zones Confidential task content

Key risks

ID	Risk	Severity	Response	Owner
R-01	Criteria interpreted inconsistently	High	Worked examples and calibration	Guidance owner
R-02	Guidance changes midstream	High	Version control and change notes	Guidance owner
R-03	Unsupported assumption affects rating	High	Evidence checklist	Evaluator
R-04	Sensitive content exposed	High	Confidentiality controls	Platform operations
